FACTORY TRAINING

3.5L Ford Turbo Systems

October 14th, 2021 @ 7:00 PM CST (US & Canada)

<https://bbbind.zoom.us/j/96853993110>

ABOUT THIS COURSE

Vehicle manufacturers have been using turbochargers on engines for many years. Changes with emission regulation standards have gotten vehicle manufacturers to drastically tighten the control of the turbocharger operation.

This course reintroduces the technicians to different turbocharger technologies and control systems. More importantly, many times a turbocharger failure is not the caused by the turbocharger itself, but the result of another failure. The course discusses diagnosing operation and performance issues as they relate to causing turbocharger failures to help ensure a complete engine repair and to avoid repeated turbocharger failures

Pre-registration is recommended
